

GK H7/H9 Tree Digger Accessories & Implements

COMBINING TECHNOLOGY AND TRADITION SINCE 1976

GK H7 & H9 TREE DIGGER ACCESSORIES & IMPLEMENTS

3-POINT ATTACHMENT

The 3-point attaches to the back of the tree digger using the existing hydraulics. 3-point implements can be attached to it such as pruners, cultivators, disks, fertilizer hoppers, flail mowers and more! The 3-point comes fully assembled and is constructed of heavy-duty steel material.

TREE CHOPPER

Designed to double productivity when trimming and chopping trees in preparation for the budding process for woody ornamental and fruit trees. This piece of equipment easily cuts tree tops to your selected height, preparing them for a variety of budding methods. It also grinds material, saving you time and money. The powerful chopper will greatly reduce your pruning time.

NOSE CONES

Nose Cones attach to the front of the tree digger to prevent low branches and shrubs from getting run over by the tracks.

GK H7/H9 Tree Digger Accessories & Implements

COMBINING TECHNOLOGY AND TRADITION SINCE 1976

BED DIGGER

The Bed Digger is used to dig plants and shrubs planted in beds. It attaches to the tree digger using a standard GK Toolbar.

TOOLBAR ATTACHMENT

The GK Toolbar allows various implements to be attached behind the digger: sub-soiler ripper, planter, bed lifter, etc. Implements clamp to the toolbar and can be adjusted based on width required.

UNDER-CUTTER BLADE

The Under-cutter Blade is used to prune roots without disturbing the tree. The angle of the blade is controlled hydraulically from inside the cab.
