

GK ORCHARD LEVELERS

COMBINING TECHNOLOGY AND TRADITION SINCE 1976

GK Orchard Levelers slice and crowd the dirt to the center then the levelers push dirt back towards the outside continuously cutting and filling. Then an adjustable V float spreads the dirt back out evenly filling in any low spots. The rear smoothing plate stabilizes dirt to firm and flatten the soil. Each unit has multiple 3-point hookups with standard and quick attachment.

Whether your orchard is large or small, we're confident that the GK orchard levelers will make quick and efficient work of your orchard leveling.

THE GK ORCHARD LEVELERS are the ideal pre- and post-harvest tool for leveling orchards floors. Our unique design will level out even the highest spots of an orchard floor in a single pass.

The GK Orchard Levelers will knock down the high spots, fill in the low areas and leave a smooth firm surface.
